# task 3 :

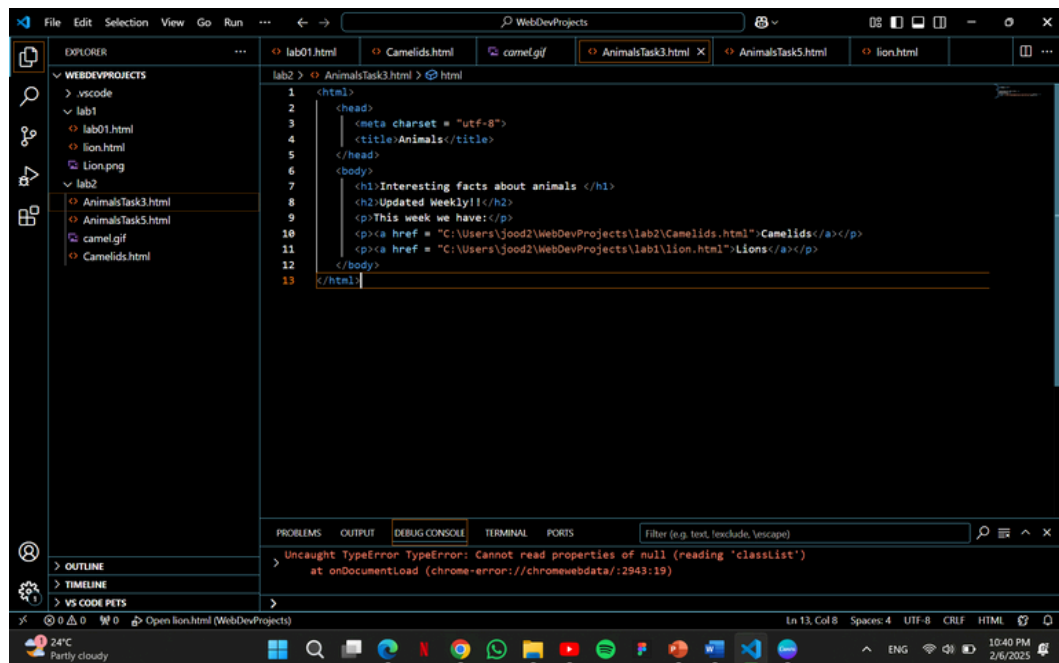

## Interesting facts about animals

### Updated Weekly!!

This week we have:

[Camelids](#)

[Lions](#)

# task 4 :

## Camelids

The four llamas and two camels are camelids tend to be large and are strictly herbivorous. Camelids differ from ruminants in several ways. They have a three-chambered rather than a four-chambered digestive tract; an upper lip that is split in two with each part separately mobile; and an isolated incisor in the upper jaw. They have long legs that, because they lack tensor skin to bridge between thigh and body, look longer still. (from Wikipedia)

A table comparing Camels and Llama

Camelid Comparison				
	Number of Humps?	Indigenous region	Split Lip?	Produces Wool?
Camels (Bactrian)	2	Africa/Asia	Llama	Llama
Llama	1	Andes Mountains
